## Engineering Services Checking & Fixture

## Checking Fixture Cup Holder Country of customer: Germany

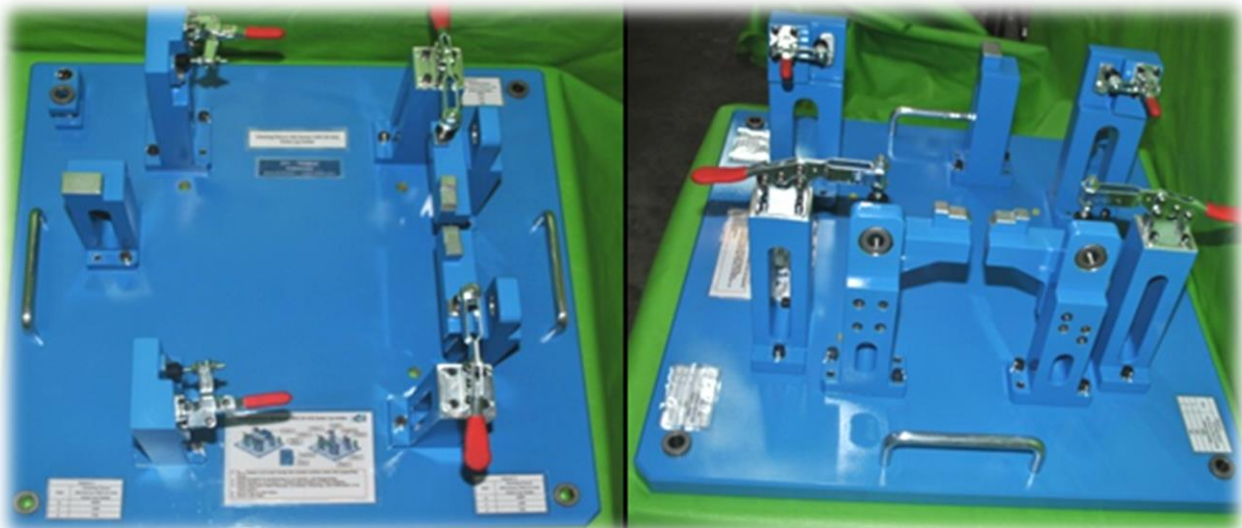

This checking fixture is used in the Alfa Romeo car project.

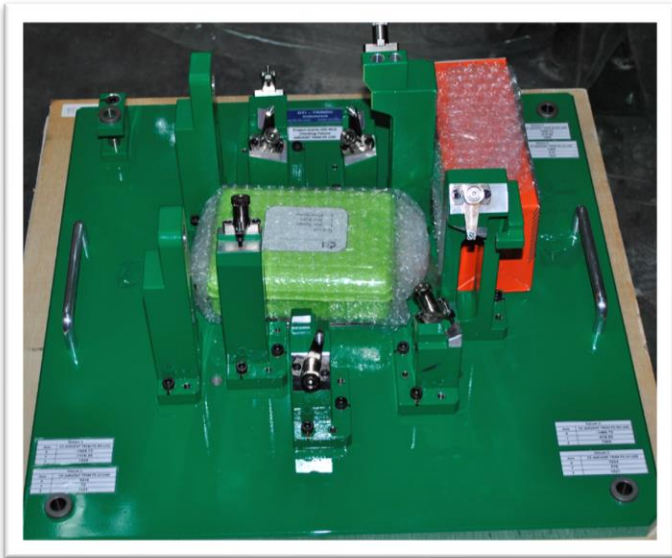

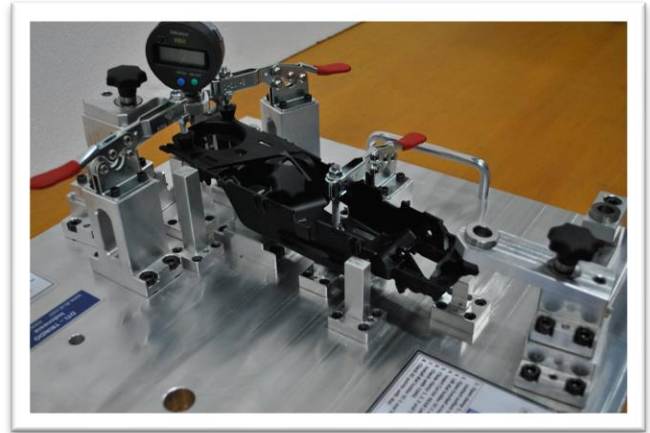

The fixture holds the cupholder of the car. And through an integrated dial gauge and the Computer Measuring Machine, controls the dimensions of the cupholder.

The challenge of this project is the maximum weight of the checking fixture which is 25kg.

A base plate material made of dural aluminum, which cannot be grinding, so it must be full machining.
