

## Engineering Design on Interior Vehicle

Work undertaken:    1. Controlling and correcting models, drawings and stueckliste  
                              2. Make a zeichnungliste

Function: As a driver's seat on the train.

The project is a design to make a driver seat on the train. DTI is given the confidence to control and correct the model, drawing and stueckliste (part list) provided by customer. In addition DTI is assigned to create a list of images on this project. With less than 2 days workmanship prove DTI is more efficient in working on interior design of the train.

Work undertaken: Create an installation image

This is a picture making installation of toilet / wc in the train. The interior model of the train provided by DTI. DTI can make any kind of design engineering.

With the many requests for installation drawings, making DTI more experienced working on installation images in the interior of the train ranging from cabins, floors, toilets / wc and much more.
